RESEARCH INTERESTS

My research interest lies at the intersection of **multimodal learning**, **natural language processing**, and **machine learning**. I am particularly passionate about advancing *reasoning* and *generalization* abilities in *low-resource* settings across different modalities. By leveraging the power of these fields, I aim to develop innovative approaches that enhance the understanding and processing of multimodal data, ultimately contributing to the development of intelligent systems capable of reasoning and generalizing effectively in resource-constrained environments.
